

Summary of the 1st CoViD-19 World Congress MPV/WCH - Integral treatment of CoViD-19's Report

The 1ST CoVID-19 World Congress MPV/WCH, brought together doctors and scientists from 18 countries from five continents, in Brasília, DF, Brazil, in a hybrid participation format, on December 10-12th, 2021 at the Brazil 21 Convention Center, presenting exhibitions and promoting scientific debate of the most diverse aspects of the disease CoViD-19. Below are the main topics agreed upon and unanimously approved in this congress:

- 1) The numerous repositioned drugs to treat CoViD-19, such as ivermectin, hydroxychloroquine, azithromycin, nitazoxanide, micronutrients such as zinc and vitamins, corticosteroids, anticoagulants, anti-androgenic, and others, until the present moment reveals unequivocal scientific evidence of efficacy and safety, with hundreds of scientific [studies](#)¹.
- 2) The [study 'Itajaí/SC'](#)², Brazil, with 220,517 people, the largest in the world, highlights the importance and efficacy of ivermectin as prophylaxis in reducing the CoViD-19 deaths. More signs of progress of this significant study are being expected.
- 3) The [study3](#) "The trajectory of cases and deaths in Brazil in the pandemic", using official data from CoViD-19 in Brazil, also with an unprecedented lecture exhibition in this congress, found that:
 - a) Lockdowns [are ineffective](#)³, and greatly increase deaths by promoting larger viral transmission, and stimulating the emergence of even more new dangerous variants;
 - b) Experimental inoculations against CoViD-19 performed in Brazil do not prevent viral transmission, nor produce satisfactory inoculation effect in terms of saving lives, with enough [evidence4](#) that it also occurs on a global scale through diverse inoculations;
 - c) The commercialization's [peaks](#)⁵, and therefore consumption, of hydroxychloroquine (HCQ) in Brazil, are associated with a substantial/crucial reduction in deaths numbers;
 - d) The [best evidence](#)⁶ currently available denotes the low efficacy or ineffectiveness of the widespread use of masks to reduce deaths during the pandemic, and its use also has a high social, economic and environmental cost.

- 4) A new concept of CoViD-19 was presented as a systemic disease, triggered by an immunogenic disorder of immunomodulation, with hyper-inflammatory responses, whose etiology is diverse and may also be caused by SARS-CoV-2;
- 5) The updated version of the (MPV) *Doctors for Life's* [Brazilian CoViD-19 Treatment Protocol⁷](#), also already published, covers all phases of the disease: prophylaxis, early home medical treatment, hospital treatment, treatment of CoViD-19 chronic disease, and the treatment of the post-vaccinated disease;
- 6) CoViD-19 inoculations are all experimental for the short period of analysis. It does not fulfill the established scientific concept/criteria of vaccine, except CoronaVac. However, all CoViD-19 inoculations are unsafe as they are associated with many [adverse effects⁸](#), including with very serious injury extent, as well as the more than 50,000 deaths reported worldwide. And, also is the known situation of underreporting on all vaccines reports platforms, such as the North American VAERS, these inoculations are pointless for controlling the CoViD-19 pandemic, [not blocking⁹](#) the virus infection in a reasonable way or its transmission to third parties;
- 7) The [health passport does not benefit¹⁰](#) any public health purposes;
- 8) [Home prophylaxis and early treatment¹](#) with repositioned drugs (*off-label*) are effective, save lives, and are actuality the rational recommendation at the moment;
- 9) Brazilian law, similar to what occurs [in other civilized nations¹¹](#), does not allow legal bodies/agencies/institutions to interfere in the medical conduct to prevent or pre-enforce procedures or oblige what treatments, or which drugs a doctor can or should prescribe to a patient's treatment, either by CoViD-19 or by any other disease. The doctor is entirely independent and autonomous to decide according to their conscience and the patient's agreement.

Brasilia, December 12th, 2021.
